

Alternative transportation is a broad based description of alternatives to the single person traveling in a vehicle.

**Alternatives include:**

- *Ride Sharing*
- *Mass Transportation*
- *Public Transportation*
- *Bicycling*
- *High occupancy vehicles*
- *Van Pool*
- *Shuttles*
- *Work from home*
- *Passenger Trains*

The common thread for each of these alternatives is the reduction of a community's vehicle miles traveled. And, most importantly, reduction in emissions attributed to transportation.
